CONTENTS OF VOLUME 5

Number 1, March 1975

William R. Farrand. Sediment Analysis of a Prehistoric Rockshelter: The Abri Pataud 1

Stephen C. Porter. Equilibrium-Line Altitudes of Late Quanternary Glaciers in the Southern Alps, New Zealand. 27

P. F. Karrow, T. W. Anderson, A. H. Clarke, L. D. Delorme, and M. R. Sreenivasa. Stratigraphy, Paleontology, and Age of Lake Algonquin Sediments in Southwestern Ontario, Canada. 49

Kenneth W. Bruland, Minoru Koide, Carl Bowser, Louis J. Maher, and Edward D. Goldberg. ^{210}Lead and Pollen Geochronologies on Lake Superior Sediments. 89

David A. Johnson and Andrew H. Knoll. Absolute Ages of Quaternary Radiolarian Datum Levels in the Equatorial Pacific. 99

Gerald Osborn and John Taylor. Lichenometry on Calcareous Substrates in the Canadian Rockies. 111

E. Juvigné. Note on Pollen Extraction from Coarse Sediments. 121

AD HOC Study Group on Permafrost and Committee on Polar Research (National Research Council). Priorities for Basic Research on Permafrost. 125

Letter to the editor

Alan L. Bryan. Paleoenvironments and Cultural Diversity in Late Pleistocene South America: A Rejoinder to Vance Haynes and a Reply to Thomas Lynch 151

Number 2, June 1975

David P. Adam. Ice Ages and the Thermal Equilibrium of the Earth, II 161

J. T. Andrews, P. E. Carrara, F. B. King, and R. Stuckenrath. Holocene Environmental Changes in the Alpine Zone, Northern San Juan Mountains, Colorado: Evidence from Bog Stratigraphy and Palynology 173

Stuart A. Harris. Petrology and Origin of Stratified Scree in New Zealand 199

A. Conrad Neuman and Willard S. Moore. See Level Events and Pleistocene Coral Ages in the Northern Bahamas 215

Frederick A. Bowles. Paleoclimatic Significance of Quartz/Illite Variations in Cores from the Eastern Equatorial North Atlantic 225

Douglas F. Williams and William C. Johnson II. Diversity of Recent Planktonic Foraminifera in the Southern Indian Ocean and Late Pleistocene Paleotemperatures 237

Minze Stuiver. Climate Versus Changes in ^{13}C Content of the Organic Component of Lake Sediments During the Late Quaternary 251

Jan Mangerud and Steinar Gulliksen. Apparent Radiocarbon Ages of Recent Marine Shells from Norway, Spitsbergen, and Arctic Canada 263

Richard G. Klein. Paleoanthropological Implications of The Nonarcheological Bone Assemblage from Swartklip I, South-Western Cape Province, South Africa .. 275

George C. Frison. Man's Interaction with Holocene Environments on the Plains... 289

Book Reviews 301

Number 3, September 1975

Barry Saltzman and Anandu D. Vernekar. A Solution for the Northern Hemisphere Climatic Zonation during a Glacial Maximum 307

Leland H. Gile. Holocene Soils and Soil-Geomorphic Relations in an Arid Region of Southern New Mexico 321

W. F. Ruddiman and L. K. Glover. Subpolar North Atlantic Circulation at 9300 yr BP: Faunal Evidence 361

Richard G. Klein. The Relevance of Old World Archeology to the First Entry of Man into the New World 391

Ronald B. Davis and Thompson Webb III. The Contemporary Distribution of Pollen in Eastern North America: A Comparison with the Vegetation 395

Ronald B. Davis, Theodore E. Bradstreet, Robert Stuckenrath, Jr., and Harold W. Borns, Jr. Vegetation and Associated Environments During the Past 14,000 Years Near Moulton Pond, Maine 435

Book Reviews 467

Number 4, December 1975

Editorial iii

Thomas D. Hamilton and Stephen C. Porter. Itkillik Glaciation in the Brooks Range, Northern Alaska 471

Linda B. Brubaker. Postglacial Forest Patterns Associated with Till and Outwash In Northcentral Upper Michigan 499

J. C. Ritchie and L. K. Koivo. Postglacial Diatom Stratigraphy in Relation to the Recession of Glacial Lake Agassiz 529

John T. Lehman. Reconstructing the Rate of Accumulation of Lake Sediment: The Effect of Sediment Focusing 541

K. W. G. Valentine and J. B. Dalrymple. The Identification, Lateral Variation and Chronology of Two Buried Paleocatenas at Woodhall Spa and West Runton, England 551

Albert A. Berti. Paleobotany of Wisconsinan Interstadials, Eastern Great Lakes Region, North America 591

Pierre LaSalle and J. A. Elson. Emplacement of the St. Narcisse Moraine as a Climatic Event in Eastern Canada 621

Author Index for Volume 5 627

Cumulative Subject Index for Volume 5 629

QUATERNARY RESEARCH

An Interdisciplinary Journal

EDITORIAL POLICY

Quaternary Research is devoted to *interdisciplinary* articles dealing with the Quaternary Period. Editorial policy requires that articles must be of broad interest, of basic significance to more than one discipline, and of high merit. Previously unpublished research results, comprehensive reviews of a field of knowledge, and occasional English translations of outstanding articles in other languages will all be considered. Generally, articles should be in English, but a small proportion of articles in French, German, or Russian will be accepted. Articles should not exceed 5000 words, but exceptions can be made for especially significant contributions. All articles will be reviewed by at least two referees.

Manuscripts and figures should be submitted at least in duplicate (a third copy could speed processing) to:

Quaternary Research
Editorial Office
University of Washington
Seattle, Washington 98195

INSTRUCTIONS TO AUTHORS

General Instructions

Manuscripts should be written in clear and concise English and should conform to the general style of the journal and the specific instructions listed below. Manuscripts that are not adequately prepared will be returned to the authors, since it is not feasible for the Editors to revise or rewrite manuscripts. Contributors, particularly those unfamiliar with English usage, are encouraged to seek the help of colleagues in the preparation and review of manuscripts prior to submission. This practice reduces the time required for review and avoids delays in publication.

Form and Style. Manuscripts should be concise but detailed enough to permit critical appraisal. They should be typewritten and double-spaced throughout (including tables, legends, and footnotes) on one side of approximately 22- × 28-cm (8.5- × 11-in.) paper with 2.5-cm (1-in.) margins. Tables and figure legends should be typed separately and placed at the end of the manuscript. All pages, beginning with the title page and including tables and figure legends, should be numbered consecutively and fastened securely. The title page should include the article title, author(s), affiliation(s) and address(es), and suggestions for index entries. Addresses should include zip codes or postal districts when applicable. All correspondence regarding the manuscript will be made with the person submitting the manuscript.

Authors are requested to include an Abstract (50-200 words, typed on a separate page following the title page). The Abstract should be a concise and informative summary that can be copied verbatim by bibliographers. The title must be suitable for indexing.

Units. Metric units should be used throughout, with English equivalents in parentheses if originally given in English units. When used in conjunction with numerals, units should be abbreviated and unpunctuated (e.g., cm, g, %). Use the American Chemical Society Handbook as a guide.

Footnotes. Footnotes in the *text* should be identified by superscripts consisting of Arabic numerals and should be typed on a separate sheet; footnotes in the *tables* should be identified by superscripts consisting of the lower-case letters a, b, c, etc., and placed at the bottom of the table.

Tables. Tables should be denoted by Arabic numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. *Units must be clearly indicated for each of the column entries in the table.*

Figures. All figures should be denoted by Arabic numerals and cited consecutively in the text, with figure legends typed on a separate sheet. Units should be clearly indicated in the figures themselves.

Please Note: All figures are to be submitted in such form as to permit photographic reproduction without retouching or redrawing, including the lettering. Lettering is reproduced as part of the photoengraving and is not set in type. Line drawings should be carefully drafted with black India ink on white drawing paper or blue drafting cloth, if possible no larger than 22- × 28-cm (8.5- × 11-in.) overall. The lettering should be large enough to allow a 50% reduction. High-quality glossy prints are acceptable for drawings and required for photographs. Color plates or fold-out illustrations cannot be accommodated unless financed by the author.

References. References should be cited in the text by author's surname and date such as "Doe (1970) reported that . . ." ". . . as previously reported (Doe *et al.*, 1970)." Suffixes (a, b, etc.) should be used to distinguish two or more works by the same author(s) in the same year; *e.g.*, Doe (1971a, 1971b). *Page numbers should be given whenever practicable.* A direct quotation should always be page referenced; a paraphrased statement should be page referenced if the article exceeds 10 pages. The reference section should be arranged alphabetically according to the author's surname. Order of items: author(s), date of publication, title of article, journal or book title (written out in full rather than abbreviated), volume number, inclusive pages, and (for books only) publisher and city, e.g.:

Zin, S. (1971a). The problem of Quaternary climatic changes. *Quaternary Research* **1**, 1–10.

Falk, B., and Li M. (1972). "The Cause of Quaternary Climatic Changes." Vol. 1. Academic Press, New York.

Cohen, R. (1967). The equatorial ionosphere. *In* "Physics of Geomagnetic Phenomena." (S. Matsushita and W. H. Campbell, Eds.), Vol. 1, pp. 561–613. Academic Press, New York

Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. 50 reprints of each article will be supplied free of charge. Additional reprints can be ordered on the form accompanying galley proof.
